## Description of the academic program for colleges and institutes

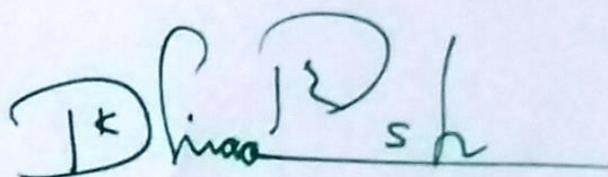

University: Southern Technical University  
College/Institute: Basra Technical Institute  
Practical section: Surveying techniques  
File filling date: 4/5/2025

Dr. Aqeel M. Hammood  
Head of department

Dr. Abdul Nasser A. Aboud  
Assistant Dean for Scientific Affairs

Assist. Prof. Dr. Diyah Kammel Shary  
Dean of Basra Technological Technical  
Institute

## **The introduction:**

The educational program is a coordinated and organized package of courses that include procedures and experiences organized in the form of study vocabulary, the main purpose of which is to build and refine the skills of graduates, making them qualified to meet the requirements of the labor market. It is reviewed and evaluated annually through internal or external audit procedures and programs, such as the external examiner program.

The academic program description provides a brief summary of the main features of the program and its courses, indicating the skills that students are working to acquire based on the objectives of the academic program. The importance of this description is evident because it represents the cornerstone in obtaining program accreditation, and the teaching staff participates in writing it under the supervision of the scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the vocabulary and paragraphs of the previous guide in light of the developments and changes in the educational system in Iraq, which included a description of the academic program in its traditional form (annual, semester) in addition to adopting the description of the academic program circulated pursuant to the letter of the Department of Studies TM3/2906 dated 5/3/2023 regarding programs that adopt the Bologna process as a basis for their work.

In this regard, we cannot but emphasize the importance of writing a description of academic programs and courses to ensure the smooth running of the educational process.

## Concepts and terms:

**Academic Program Description:**The academic program description provides a concise summary of its vision, mission and objectives, including a precise description of the targeted learning outcomes according to specific learning strategies.

**Course Description:**Provides a concise summary of the main characteristics of the course and the learning outcomes expected of the student, demonstrating whether the student has made the most of the learning opportunities available. It is derived from the programme description.

**Program vision:**An ambitious vision for the future of the academic program to be an advanced, inspiring, motivating, realistic and applicable program.

**Program message:**It briefly explains the objectives and the activities required to achieve them, and it also identifies the paths and directions of the programme's development.

**Program objectives:**These are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

**Curriculum structure:**All courses/subjects included in the academic program according to the approved learning system (semester, year, Bologna track) whether they are required (ministry, university, college and scientific department) with the number of academic units.

**Learning outcomes:**A compatible set of knowledge, skills and values acquired by the student after successfully completing the academic program. The learning outcomes for each course must be determined in a way that achieves the program's objectives.

**Teaching and learning strategies:** It is the strategies used by the faculty member to develop the teaching and learning of the student and they are plans that are followed to reach the learning objectives. That is, it describes all the classroom and extracurricular activities to achieve the learning outcomes of the program.

<b>1. Program vision</b>
Preparing a technical educational program that keeps pace with scientific developments in construction and building, to be a distinctive and distinctive mark in terms of the quality of the outputs necessary for the success of intermediate technical cadres in performing their role in the progress of projects.

<b>2. Program message</b>
---------------------------

**Working to prepare a specialized technical cadre in the field of construction and building, equipped and armed with knowledge, science and professional ethics in a manner consistent with the spirit of the times and the development taking place in the field of construction, while taking into account the requirements of the labor market.**

### **3. Program objectives**

- 1 .Preparing qualified technical personnel with the knowledge and practical skills in the fields of surveying, mapping, and geographic information systems (GIS).
- 2 .Enabling students to use modern technologies in land surveying, aerial photography, and remote sensing.
- 3 .Developing students' abilities to analyze spatial data and produce accurate and efficient digital maps.
- 4 .Enhancing engineering thinking and problem-solving related to surveying and urban projects.
- 5 .Establishing the principles of teamwork, professional responsibility, and adherence to professional ethics in engineering fields.
- 6 .Preparing graduates for the labor market in government departments and private sector companies operating in the fields of surveying, planning, and infrastructure.

### **4. Programmatic accreditation**

Not Found

### **5. Other external influences**

Field visits to work projects within the geographical area, taking into account the selection of projects that contain modern methods of implementation in terms of construction style, structural elements, and materials used.

### **6. Program Structure**

8. Expected learning outcomes of the program
<b>Knowledge</b>
1- Enabling students to acquire knowledge, understanding, principles, theories and fundamentals in civil specializations.
2- Enabling students to understand modern advanced scientific and practical topics in technical civil specializations.
3- To familiarize students with the most important computer software used in the field of civil specializations.
4- Enabling students to understand the basics of the operation of laboratory devices used in the examination and evaluation of materials used in construction and the quality of completed buildings, and how to work on these laboratory devices and perform tests on them.
<b>Skills</b>
1- Ability to read and prepare construction engineering drawings.

2- Ability to perform laboratory experiments according to standard technical specifications.

3- The ability to write and formulate technical engineering reports on the results of scientific examinations and tests and the ability to deduce the results and their effects from the test.

4- Developing students' abilities to participate in analyzing problems and finding appropriate solutions.

5- Developing communication skills so that the graduate can be a link between the worker and the advanced engineering staff.

### **Values**

1- Developing the spirit of cooperation and teamwork

2- Emphasizing professional ethics and appropriate methods of dealing

## **9. Teaching and learning strategies**

1. Theoretical lectures.
2. Scientific discussions.
3. Working in groups.
4. Practical lectures in engineering laboratories.
5. Scientific seminars and presentation of the latest scientific developments in the specialization by students.
6. Scientific trips to the actual work site and exposure to the most important problems and applications in the field of civil specializations within the actual work reality.
7. Graduation projects for final year students..

<b>10. Evaluation methods</b>
<ol style="list-style-type: none"> <li>1. Monthly or quarterly written exams.</li> <li>2. Quick exams.</li> <li>3. Writing scientific and practical reports.</li> <li>4. Writing reports on the most important engineering matters observed during scientific trips.</li> <li>5. Scientific seminars.</li> <li>6. Homework.</li> <li>7. Graduation project discussion committees for final year students.</li> </ol>

**11. Faculty**

**Faculty members**

Number of the teaching staff		Special requirements/skills (if any)		Specialization		Academic Rank
lecturer	staff			special	general	
	1			Structure	civil	Lecturer
	3			general	Surveying	Assistant Lecturer
	1			soil	civil	Assistant Lecturer
1	1			general	mathematics	Assistant Lecturer
1					law	Lecturer
1				general	English	Assistant Lecturer
3	8					the total

**Professional development**

**Mentoring new faculty members**

1. Introducing new faculty members to the department's activities and its programme and involving them in the department's scientific committees.

2. Keeping up with the implementation of the department's programme by clarifying developments

#### **Professional development for faculty members**

1. Student opinion survey at the end of each semester on several personal development topics.
2. Survey faculty members' opinions at the end of each semester on the best ways to develop courses and their teaching methods.
3. Conducting development and training courses to deliver up-to-date information worldwide regarding teaching and curricula.
4. Coordinating with the Quality Assurance Department at the Institute and the University to follow up on the implementation of the academic program in the department and ways to develop it.

### **12. Acceptance Criteria**

First: Admission requirements to the institute

1. Approval of admission requirements for students according to the regulations of the Ministry of Higher Education and Scientific Research (central admission).
2. To successfully pass any special test or personal interview deemed necessary by the Council of the Institute or University.
3. To be medically fit for the specialty applied for.

Second: Admission requirements to the scientific department

1. The student chooses his desire from more than one desire arranged according to preference.
2. High school acceptance rate.
3. The average of the course in which the student wishes to study.
4. The capacity of the scientific department.

### **13. The most important sources of information about the program**

#### 14. Program development plan

1. Updating curricula to keep pace with developments in the field of specialization.
2. Adoption of modern specialized software.
3. Continuously updating laboratories in line with the development of equipment, methods and tools in the field of construction.

## Course Description First Semester/First Year

1. Course name:	
Surveying / 1	
2. Course code:	
3. Chapter/Year:	
First semester / first year	
4. Date this description was prepared:	
10/10/2024	
5. Available attendance forms:	
Dealing with all available possibilities for the purpose of delivering and educating students.	
6. Number of study hours (total) / Number of units (total):	
90 hours per year (2 theoretical + 4 practical over 30 weeks) / 6 units	
7. Name of the course administrator (if more than one name is mentioned)	
Name: Louay Muzahim Abdul Karim Email: Luay.abdulkareem@stu.edu.iq	
8. Course objectives	
<p><b>The aim of studying surveying is for the student to understand the basics of flat area and find relationship between the location of points near or above the surface of the earth and to be able to measure the horizontal and vertical distance of the observed target.</b> Calculating areas and volumes from field data providing students with information on drawing maps that show longitudinal and transverse sections of roads canals and preparing contour maps.</p>	
9. Teaching and learning strategies	
The teaching and learning strategy is based on teaching the student all skills to carry out all surveying work with the help of surveying equipment and related Indian software.	<b>Strategy</b>
10. Course structure	

<b>Evaluation method</b>	<b>Learning method</b>	<b>Name of the unit or topic</b>	<b>Required learning outcomes</b>	<b>Watch es</b>	<b>The week</b>
<b>Live through questions, participation and reports</b>	theoretical aspect And get to know Devices	Introduction to spa	Identify the space Level and area Geodesy	6	the first
<b>Live through questions, participation and reports</b>	Theoretical side ar side practical	Units of measurement	Get to know the unit Length and area Size in French and English system	6	the second
<b>Live through questions, participation and reports</b>	Theoretical side ar side practical	drawing scale	Learning on the scal Linear, comparative and network	6	the third
<b>Live through questions, participation and reports</b>	Theoretical side ar side practical	Distance measurement	Measuring distance o flat and uneven grou	6	Fourth
<b>Live through questions, participation and reports</b>	Theoretical side ar side practical	Measure the slant distance	Measuring the slant distance on a regular and irregular surface Regular	6	Fifth

<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Engineering operations	erecting columns in different ways	6	Sixth
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Potential Obstacles	Possible obstacles during distance measurement	6	Seventh
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Clear area details	Learn how to create polygon and padding	6	The eighth
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Settlement	Learn how to determine and measure levels for points.	6	Ninth
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Complete the settlement	The purpose of leveling, degrees of accuracy, the leveling device, and how to handle and use it	6	tenth
<b>Live through</b>	Theoretical side and side practical	Completing calculation methods	Learn how to calculate using the rise and fall	6	eleventh

<b>questions, participation and reports</b>			method and compare them		
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Vertical closing error	Learn how to detect a lockout error and how to correct it.	6	twelfth
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Longitudinal and cross sections	Learn about all types of cross sections and longitudinal sections and how to deal with them.	6	thirteenth
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	section drawing	Learn how to draw cross and longitudinal sections.	6	fourteenth
<b>Live through questions, participation and reports</b>	Theoretical side and side practical	Contour period	Learn how to make contour maps.	6	fifteenth

**11. Course Evaluation**

Final Exam	striving	Second semester exam	Chapter One Quest
50 degrees	50 degrees	10 reports and research	10 degrees reports and research
		20 monthly exams	20 marks monthly exam
		20 practical degrees	20 practical degrees

12. Learning and teaching resources
1 - Raymond E. Davis Joe Wkelly. Elementary plan surveying.
2 - Ziad Abdul Jabbar Al-Bakr, Ibrahim Daoud Alwan, practical area.
3 - Razan Ibrahim 2011, Fundamentals of Surveying, Amman - Community Library.
4- Yousef Siam 2001, Faculty of Engineering, University of Jordan.
5 - Yassin Obaid Ahmed 1990 Engineering Surveying - Faculty of Engineering, Bahou University.

1. Course name:
Remote Sensing/1
2. Course code:
3. Semester/Year: Annual
My semester / first year
4. Date this description was prepared:
10/13/2024
5. Available attendance forms:
My presence
6. Number of study hours (total) / Number of units (total):
60 hours per year (2 theoretical hours over 30 weeks / 4 units (2 units per semester)
7. Name of the course administrator (if more than one name is mentioned)
the name:Balqis Barghash Hamoud Thamer Email:balqeesbarghash1960@gmail.com
8. Course objectives
<b>The student should be able to know the basics of remote sensing, which include monitoring, studying and identifying terrestrial or near-terrestrial phenomena without contact with them, through studying and analyzing the rays or electromagnetic energy or emitted from those targets that have the properties of the target under study.</b>
9. Teaching and learning strategies

1. Cognitive strategies. 2. Active learning strategies. 3. Cooperative learning strategies. 4. Discussion strategy.				Strategy	
10. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	Watches	The week
<b>Chapter Two</b>					
Theoretical exams and discussion	Theoretical lectures	Allergy	Interpretation of images and sp data, features, shape	2 hours (theoretical)	the first
		Allergy.	size, style, shadows, shop ,composition,location, <b>The com</b>	2 hours (theoretical)	the second
		Satellite sensing applications	<b>people</b> For the basics of interpretatio Aerial photos for Earth surface analysis dig	2 hours (theoretical)	the third
		Satellite sensing applications	processing of space data (images) And its radiological evaluation	2 hours (theoretical)	Fourth
		Radar Specifications	And remove the distortion from improve it and straighten it Engineering	2 hours (theoretical)	Fifth
		Radar Specifications	Air and space sensors, satellites.	2 hours (theoretical)	Sixth
		Satellite image processing	Air and space sensors, satellites	2 hours (theoretical)	Seventh
		Satellite image processing	Interpretation of images and sp data, features of shape, size, patte shadows, darkness, compositi location, basic factors in interpret	2 hours (theoretical)	The eighth
		Satellite image processing	aerial images for the purpose analyzing the Earth's surface	2 hours (theoretical)	Ninth
		The model		2 hours (theoretical)	tenth

		The model	Directing digital aerial photographs to form a three-dimensional model	2 hours (theoretical)	eleventh
		Satellites	three-dimensional display of Earth's surface and extract	12 hours (theoretical)	twelfth
		Satellites	information and measurements	2 hours (theoretical)	thirteenth
		Mosaic	Earth's surface features through the	2 hours (theoretical)	fourteenth
		Mosaic	dimensional vision	2 hours (theoretical)	fifteenth

### 11. Course Evaluation

The distribution is as follows: 40 points for the endeavour (30 points for theory + 10 points for the year's work) 60 points for the final exam.

### 12. Learning and teaching resources

1. Swain, Pf Davis SM, (1978) "Remote sensing the quantities approach", New York	Required textbooks (methodology if any)
Murad Al-Sheikh, Makram Anwar, (1991), "Remote Sensing Science", Technical Institutes Authority, Ministry of Higher Education and Scientific Research, Iraq.	Main References (Sources)
<b>-Aerial Survey, Labib Nassif, Louise Khalil, Khaled Hilal Sarhan, Technical Education Authority, Second Edition 1999</b>	Recommended supporting books and references (scientific journals, reports, etc.)
	Electronic references, websites

13. Course name:
Quantity Survey/1
14. Course code:
15. Chapter/Year:

First semester					
16. Date this description was prepared: 02/14/2024					
10/16/2024					
17. Available attendance forms:					
Attendance to class					
18. Number of study hours (total) / Number of units (total):					
30 hours					
19. Name of the course administrator (if more than one name is mentioned)					
the name: Wadi Mohammed Wadi Email:wadimw@stu.edu.iq					
20. Course objectives					
<ul style="list-style-type: none"> <li>• .....</li> <li>• .....</li> <li>• .....</li> </ul>			<p>1- The student should be able to identify the types of construction materials, machines, equipment, and implementation methods for engineering projects (buildings).</p>		
21. Teaching and learning strategies					
Using direct explanation method with visual aids					Strategy
22. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	Watches	The week
Written exams and discussion	Theoretical lectures	Introducing the student to the types of construction materials		2 hours	the first
		Calculate the quantities of cement, sand and gravel		2 hours	the second
		Types of bricks		2 hours	the third

		Calculate the volume of mortar	2 hours	Fourth
		Types of tiles	2 hours	Fifth
		Moisture-proofing materials plast	2 hours	Sixth
		Construction machinery	2 hours	Seventh
		The purpose of guessing	2 hours	The eighth
		Earthworks	2 hours	Ninth
		Structural paragraphs below level of the barrier Humidity	2 hours	tenth
		Construction paragraphs	2 hours	eleventh
		Concrete	2 hours	twelfth
		Concrete	2 hours	thirteenth
		Calculate concrete quantities	2 hours	fourteenth h fifteenth

### 23. Course Evaluation

Distribution as follows: 50 points for the effort (50 theoretical + 10 annual work). 50 points for the final exam.

### 24. Learning and teaching resources

- 1- Quantity Survey / Muwaffaq Al-Saour / Ministry of Education
- 2- Quantity Survey / Sami Miri Kazim, Abdul Ka Al-Shamaa / Ministry of Education
- 3- Construction Materials / Jalal Bashir Sarsar Ministry of Education

	4- Estimation and specifications of construct works / Ghanem Abdul Rahman
--	---

13. Course name:					
Mathematics/1					
14. Course code:					
15. Semester/Year: Annual					
quarterly/ First year					
16. Date this description was prepared:					
10/15/2024					
17. Available attendance forms:					
In-person only					
18. Number of study hours (total) / Number of units (total):					
60 study hours per semester / 2 units					
19. Name of the course administrator (if more than one name is mentioned)					
the name: M.M. Fatima Abdul Razzaq Mohammed					
Email: Fatima.abdulrazaq@stu.edu.iq					
20. Course objectives					
Developing the student's skill in employing the principles of mathematics in various engineering applications and developing their skills to benefit from them in other engineering lessons.					
21. Teaching and learning strategies					
5. Cognitive strategies. 6. Active learning strategies. 7. Cooperative learning strategies. 8. Discussion strategy.					Strategy
22. Course structure					
<b>Evaluation method</b>	<b>Learning method</b>	<b>Name of the unit or topic</b>	<b>Required learning outcomes</b>	<b>Watches</b>	<b>The week</b>
<b>Chapter One</b>					

Written exams and discussion	Theoretical lectures	Review in solving equations	1- The student learns about the uses of mathematics in calculating area.  2- Developing intellectual, logical and analytical skills to benefit from them in various aspects of study.	2 hours (theoretical)	the first
		Matrices types, addition and subtraction of matrices		2 hours (theoretical)	the second
		Transpose matrix Inverse matrix Inverse matrix.		2 hours (theoretical)	the third
		Binary and ternary determinants		2 hours (theoretical)	Fourth
		Solving simultaneous equations using determinants.		2 hours (theoretical)	Fifth
		Equation of a straight line, two lines perpendicular, two lines parallel.		2 hours (theoretical)	Sixth
		Trigonometry Some important laws in trigonometric ratios.		2 hours (theoretical)	Seventh
		Solving a triangle Some important rules for solving a triangle.		2 hours (theoretical)	The eighth
		Circular sector, circular segment, finding area and diameter.		2 hours (theoretical)	Ninth
		Derivative, polynomial functions, implicit functions.		2 hours (theoretical)	tenth
		Derivative of trigonometric functions.		2 hours (theoretical)	eleventh
		Derivative applications, finding the equation of the tangent.		2 hours (theoretical)	twelfth
		Integration, integration of algebraic functions.		2 hours (theoretical)	thirteenth
		Integration of trigonometric functions.		2 hours (theoretical)	fourteenth
Definite integration, applications of definite integration.	2 hours (theoretical)	fifteenth			

### 23. Course Evaluation

Distribution as follows: 40 points for the effort (30 theoretical + 10 annual work). 60 points for the final exam.

### 24. Learning and teaching resources

Required textbooks (methodology if any)

Thomas' Calculus – G., B., Thomas, M., D., Weir, J. Hass	Main References (Sources)
Reviewing many scientific journals issued by various Iraqi universities, in addition to visits to scientific libraries and the institute's library.	Recommended supporting books and references (scientific journals, reports, etc.)
	Electronic references, websites

1. Course name:	
Earth surface science	
2. Course code:	
3. Semester/Year: Annual	
quarterly	
4. Date this description was prepared:	
10/15/2024

		15. Object pronouns			Fifth

### 35. Course Evaluation

Distribution as follows: 50 points for the endeavour (40 practical + 10 annual work). 50 points for the final exam.

### 36. Learning and teaching resources

New Headway Plus: Beginner - Students Book

1. Course name:						
Human rights and democracy						
2. Course code:						
3. Semester/Year: Annual						
quarterly/ First year						
4. Date this description was prepared:						
03/14/2024						
5. Available attendance forms:						
In-person only						
6. Number of study hours (total) / Number of units (total):						
30 hours in the first semester (2 theoretical hours over 15 weeks) / 2 units						
7. Name of the course administrator (if more than one name is mentioned)						
Name: Abbas Brisam Habib						
Email: abbas.b@gmail.com						
8. Course objectives						
Studying the principles of human rights, democracy and freedom is a necessity of the age because of its connection to human civil and political life, as it contributes greatly to promoting equality and development and preventing conflicts and human rights violations by promoting the language of dialogue, accepting other opinions and supporting democratic participation processes in order to establish societies in which all human rights of all people are appreciated and respected.						
9. Teaching and learning strategies						
1. Cognitive strategies. 2. Active learning strategies. 3. Cooperative learning strategies. 4. Discussion strategy.					Strategy	
10. Course structure						
Evaluation method	Learning method	Name of the unit or topic	Required outcomes	learning	Watches	The week
Chapter One						

Weekly, monthly, daily, written and end-of-year exams.	Theoretical lectures	Historical development of human rights.	Developing cognitive understanding	2 hours (theoretical)	the first
		Human rights in ancient civilizations (Mesopotamian civilization and other ancient civilizations).			
		Human rights in divine laws with a focus on human rights in Islam.		2 hours (theoretical)	the second
		Human rights in the Middle Ages and modern times.		2 hours (theoretical)	the third
		Regional recognition of human rights at the European, American, African, Islamic and Arab levels.		2 hours (theoretical)	Fourth
		Non-governmental organizations and their role in human rights (International Committee of the Red Cross, Amnesty International, Human Rights Watch, Arab Organization for Human Rights).		2 hours (theoretical)	Fifth
Human rights in international and regional covenants and national legislation.	2 hours (theoretical)	Sixth			
Human rights in international conventions (the Universal Declaration of Human Rights, the two international covenants on human rights).					

	Human rights in regional charters (European Convention on Human Rights, American Convention on Human Rights, African Charter on Human Rights, Arab Charter on Human Rights).	2 hours (theoretical)	Seventh
	Human rights in national legislation (the Iraqi Constitution).	2 hours (theoretical)	The eighth
	Forms and generations of human rights: Forms of human rights (individual rights, collective rights).  Generations of human rights (first generation: civil and political rights), (second generation: economic and social rights), third generation: modern human rights), water and environmental awareness	2 hours (theoretical)	Ninth
	Human rights guarantees and protection at the national level:  Constitutional, judicial and political guarantees.	2 hours (theoretical)	tenth
	Human rights guarantees and protection at the regional and international levels.  (The role of the United Nations, the role of regional organizations), the crime of genocide.	2 hours (theoretical)	eleventh

	Classification of public freedoms:  (Basic and individual freedoms: freedom of security and feeling secure, freedom of coming and going, personal freedom).		2 hours (theoretical)	twelfth
	Intellectual and cultural freedoms: (freedom of opinion, freedom of belief, freedom of education).		2 hours (theoretical)	thirteenth
	Freedom of the press, freedom of assembly, freedom of association.		2 hours (theoretical)	fourteenth
	Economic and social freedoms (freedom of work, freedom of ownership, freedom of trade and industry).		2 hours (theoretical)	fifteenth

### 11. Course Evaluation

Distribution as follows: 40 points for the endeavour (30 theoretical exams + 10 annual work). 60 points for the final exam (theoretical).

### 12. Learning and teaching resources

	Required textbooks (methodology if any)
1- Human Rights (Development - Content - Protection) Prof. Dr. Riyad Aziz Hadi 2- Human rights, democracy and public freedoms. Dr. Maher Sabry Kazem	Main References (Sources)
Reviewing many scientific journals issued by various Iraqi universities, in addition to visits to scientific libraries and the institute's library.	Recommended supporting books and references (scientific journals, reports, etc.)
	Electronic references, websites

## Course Description Second Semester/First Year

1. Course name:					
Surveying / 2					
2. Course code:					
3. Chapter/Year:					
Second semester / first year					
4. Date this description was prepared:					
10/10/2024					
5. Available attendance forms:					
Dealing with all available possibilities for the purpose of delivering and educating students.					
6. Number of study hours (total) / Number of units (total):					
6 hours ((4 units					
7. Name of the course administrator (if more than one name is mentioned)					
Name: Louay Muzahim Abdul Karim Email: luay.abdulkareem@stu.edu.iq					
8. Course objectives					
<b>The aim of studying surveying is for the student to understand the basics of mathematical calculations to find the actual measurements of distances and angles, as well as to calculate the coordinates of the locations of ground points in order to sign them on paper at a specific drawing scale.</b>					
9. Teaching and learning strategies					
The teaching and learning strategy is based on teaching the student all skills to carry out all surveying work with the help of surveying equipment and related Indian software.					<b>Strategy</b>
10. Course structure					
<b>Evaluation method</b>	<b>Learning method</b>	<b>Name of the unit or topic</b>	<b>Required learning outcomes</b>	<b>Watch es</b>	<b>The week</b>
Live through questions, participat	Theoretica l aspect and	Theodolites	Learn about theodolites and	6	the first

ion and reports	familiarity with devices		how to use them.		
Live through questions, participation and reports	Theoretical and practical side	vertical angles	How to measure vertical angles	6	the second
Live through questions, participation and reports	Theoretical and practical side	North	Learn and identify the types of north and how to measure it.	6	the third
Live through questions, participation and reports	Theoretical and practical side	Horizontal angles	Teaching the student how to observe horizontal angles	6	Fourth
Live through questions, participation and reports	Theoretical and practical side	Polygons	Teaching the student about the types of polygons and how to deal with them	6	Fifth
Live through questions, participation and reports	Theoretical and practical side	Corrections	Teaching the student to make corrections to different types of angles.	6	Sixth
Live through questions, participation and reports	Theoretical and practical side	Vehicles	Teaching the student to calculate horizontal and vertical components.	6	Seventh

Live through questions, participation and reports	Theoretical and practical side	Forward and reverse accounts	Teaching the student forward and reverse calculations of point locations	6	The eighth
Live through questions, participation and reports	Theoretical and practical side	Coordinates	Teaching the student to calculate the coordinates of the locations of points	6	Ninth
Live through questions, participation and reports	Theoretical and practical side	closed polygon	Teaching the student how to make a closed polygon and how to select its points	6	tenth
Live through questions, participation and reports	Theoretical and practical side	polygon angles	Teaching the student how to correct the angles of a polygon in different ways	6	eleventh
Live through questions, participation and reports	Theoretical and practical side	polygon angles	Continuing to teach the student how to correct the angles of a polygon in different ways	6	twelfth
Live through questions, participation and reports	Theoretical and practical side	Coordinates and Vehicles	Teaching the student about horizontal and vertical component	6	thirteenth

			calculations and coordinate calculations		
<b>Live through questions, participation and reports</b>	Theoretical and practical side	Coordinates and Vehicles	Teaching the student about horizontal and vertical component calculations and coordinate calculations	6	fourteenth
<b>Live through questions, participation and reports</b>	Theoretical and practical side	Corrections	Completing the student's education on how to correct using the compass and crossing method	6	fifteenth

### 11. Course Evaluation

Final Exam	striving	Second semester exam	Chapter One Quest
50 degrees	50 degrees	10 reports and research	10 degrees reports and research
		20 monthly exams	20 marks monthly exam
		20 practical degrees	20 practical degrees

### 12. Learning and teaching resources

1 - Raymond E. Davis Joe Wkelly. Elementary plan surveying.

2 – Singh, Narindr Surveying. Delhi 1982

3 - Ziad Abdul Jabbar Al-Bakr, Ibrahim Daoud Alwan, practical area.

4 - Razan Ibrahim 2011, Fundamentals of Surveying, Amman - Community Library.

5- Yousef Siam 2001, Faculty of Engineering, University of Jordan.

6 - Yassin Obaid Ahmed 1990 Engineering Surveying - Faculty of Engineering, Bahou University.

13. Course name:					
Quantity Survey/2					
14. Course code:					
15. Chapter/Year:					
First semester					
16. Date this description was prepared: 02/14/2024					
10/16/2024					
17. Available attendance forms:					
Attendance to class					
18. Number of study hours (total) / Number of units (total):					
30 hours					
19. Name of the course administrator (if more than one name is mentioned)					
the name: Wadi Mohammed Wadi					
Email:wadimw@stu.edu.iq					
20. Course objectives					
<ul style="list-style-type: none"> <li>• .....</li> <li>• .....</li> <li>• .....</li> </ul>			<p>2- The student should be able to identify the types of construction materials, machines, equipment, and implementation methods for engineering projects (buildings).</p>		
21. Teaching and learning strategies					
Using direct explanation method with visual aids					Strategy
22. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	Watches	The week
	Theoretical lectures	Calculate the amount of finishing work		2 hours	the first

Written exams and discussion					
		Calculate the quantities of flooring works		2 hours	the second
		Apply the above paragraphs on the computer		2 hours	the third
		Types of foundations for buildings		2 hours	Fourth
		Types of foundations		2 hours	Fifth
		Types of roads		2 hours	Sixth
		Road axes		2 hours	Seventh
		Earthwork volumes		2 hours	The eighth
		Earthwork volumes		2 hours	Ninth
		Types of joints		2 hours	tenth
		Guess the channels		2 hours	eleventh
		Railways		2 hours	twelfth
		Types of airports		2 hours	thirteenth
		Traffic signs Show movies		2 hours	fourteenth fifteenth

**23. Course Evaluation**

Distribution as follows: 50 points for the effort (50 theoretical + 10 annual work). 50 points for the final exam.

**24. Learning and teaching resources**

	<p>5- Quantity Survey / Muwaffaq Al-Saour / Ministry of Education</p> <p>6- Quantity Survey / Sami Miri Kazim, Abdul Ka Al-Shamaa / Ministry of Education</p> <p>7- Construction Materials / Jalal Bashir Sarsar Ministry of Education</p> <p>8- Estimation and specifications of construct works / Ghanem Abdul Rahman</p>

44. Course objectives

<ul style="list-style-type: none"> <li>• .....</li> <li>• .....</li> <li>• .....</li> </ul>	<p>1_ Teaching and training students how to calculate and measure areas, find the volumes of soil quantities, perform calculations for horizontal and vertical curves, project them onto the ground, and project organized structures.</p> <p>2_ Carrying out the necessary calculations to find the missing lengths and directions of the boundaries of the plots of land and the coordinates of their corners and calculating their areas..</p>
---	---

45. Teaching and learning strategies

<p><b>1_ Learning strategy: Finding lengths and directions</b>  <b>_2 Learning strategy for land division and area calculation</b>  <b>_3 Cooperative learning strategies</b></p>	<p><b>Strategy</b></p>
---	------------------------

46. Course structure

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	Watches	The week
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Introduction to engineering surveying and the drawing scale used for each case, with an explanation of the different methods of</b>	<b>The student learns on Areas of regular shapes, and division into regular geometric shapes such as triangles, squares, rectangles, trapezoids, circles and their parts</b>	4 hours	the first

		<b>calculating areas in the field.</b>			
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Place the columns at equal intervals (trapezoidal method).trapezoidal and Simpson's method), and</b>	<b>Developing the student's skill how Establishing columns at unequal intervals on the survey line of a plot of land and calculating its areas using all the methods shown.</b>	4 hours	the second
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Using the coordinate method in calculating areas, the method of multiplying the longitude of the migrations(DM D)</b>	<b>Teaching the student to calculate the areas of shapes</b>	4 hours	the third
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Different methods for calculating areas from a map include: dividing it into regular geometric shapes such as triangles or squares, using graph papers, using slides,</b>	<b>Teaching the student toArithmetic and reconstruction methods for calculating the areas of cross-sections of different shapes and different slopes of the ground surfaceD</b>	4 hours	Fourth

		using an electronic planometer to calculate areas (when the fixing point is inside or outside the shape).			
Daily written tests and discussion	Article explanation Theory and practice practically	Calculating the volumes of soil quantities using the law of the average of the two bases, the method of the missing wedge (or prism), and the approximate method from the longitudinal section, and calculating the volume of the quarry and reservoir for dams using contour lines, and performing calculations and drawing the soil transport curve.	Help the student to know how to use the map to calculate areas and volumes in different ways.	4 hours	Fifth

Daily written tests and discussion	Article explanation Theory and practice practically	<b>Identifying road surveying: This includes the ground and aerial surveying methods used to determine the path of the road's center line.</b>	<b>Learn on Calculating the soil quantities for a road section containing convex and concave vertical curves and a constant slope. A scientific trip to some government departments.</b>	4 hours	Sixth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Identify the types of vertical curves</b>	<b>Knowing the types of convex and concave curves and the equation for the parabola to calculate the level (analytical method)</b>	4 hours	Seventh
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Horizontal curve</b>	<b>Know the elements of the simple circular horizontal curve, symbols, terms and laws</b>	4 hours	The eighth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Compound and inverse circular horizontal curves and their types</b>	<b>Helping the student calculate its elements and use them in expressways and intersections.</b>	4 hours	Ninth
Daily written tests	Article explanation Theory and practice practically	<b>Different methods of projecting a simple circular curve</b>	<b>The student learns the method of tangent angles (or deviation).</b>	4 hours	tenth

and discussion					
Daily written tests and discussion	Article explanation Theory and practice practically	<b>How to use columns to project curves</b>	<b>Teaching them to drop in different ways</b>	4 hours	atheistic ten
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Transitional or spiral curves</b>	<b>Teach the student to use it and its calculations.</b>	4 hours	the second ten
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Small project on the roads</b>	<b>How to know how to perform the necessary calculations for vertical and horizontal curves</b>	4 hours	the third ten
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Drawing of soil transport curve and showing the width of excavation and backfilling</b>	<b>Preparing the student to calculate the areas of cross sections</b>	4 hours	Fourth ten
Daily written tests and discussion	Article explanation Theory and practice practically	<b>And hold discussions on the final results of the division.</b>	<b>Teaching the student the surveying work for the construction of floors and buildings</b>	4 hours	Fifth ten

47. Course Evaluation

Distribution as follows: 50 points for the endeavour (40 theoretical + 10 annual work). 50 points for the final exam.

48. Learning and teaching resources

**Youssef Siam2001, Surveying - Faculty of Engineering  
University of Jordan**

**1-Raymond E. Davis Joe Wkelly.  
Elementary plan surveying  
2- Singh, Narindr Surveying\_ Tata MC  
Graw – Hill publishing company**

Mapping technology/ 1	
2. Course code:	
3. Chapter/Year:	
Quarterly the first	
4. Date this description was prepared	
10/14/2024	
5. Available attendance forms:	
In presence	
6. Number of study hours (total) / Number of units (total):	
4/4	
7. Name of the course administrator (if more than one name is mentioned)	
Name: Nimat Hamid Jassim Email: niimat.jasim@stu.edu.iq	
8. Course objectives	
<ul style="list-style-type: none"> <li>• .....</li> <li>• .....</li> <li>• .....</li> </ul>	<p>1- The student can learn about the principles of cartography and its integration with other specialization courses such as surveying and aerial surveying in preparing maps.</p> <p>2- Raising the student's efficiency in drawing, designing, preparing and producing maps.</p>
9. Teaching and learning strategies	

1- Theoretical lectures 2- Scientific discussions 3- Working in groups 4- Practical lectures in the ceremonies 5- Scientific seminars and presentation of the latest scientific developments within the specialization. 6- Scientific trips to work sites 7- Graduation projects for final year students	<b>Strategy</b>
--	-----------------

10. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	Watches	The week
<b>Short exam</b>	Theoretical explanation	Principles of cartography, its nature and its relationship to land surveying		4 hours	the first
		Types of maps and their characteristics		4 hours	the second
<b>Oral questions</b>	Providing types Maps	Methods of reducing and enlarging maps, geographic and quadratic coordinates.		4 hours	the third
<b>Homework</b>					
<b>Short exam</b>		Theoretical			

explanation  Data show method	Completed last week Map projections definition And its classification		4 hours	Fourth
	Cylindrical Projections		4 hours	Fifth
	Muscat Mercator		4 hours	Sixth
	Conic Projections		4 hours	Sevent h
	Muscat Lambert		4 hours	The eighth
	Conic Projections		4 hours	Ninth
	Muscat Bonn		4 hours	tenth
	Networking and indexing Maps		4 hours	elevent h
	The role and importance of colors Topographic symbols		4 hours	twelfth
	Maps pronunciation		4 hours	thirtee nth
	Topography		4 hours	fourtee nth
Map design		4 hours	fifteent h	

### 11. Course Evaluation

Distribution as follows: 50 points for the endeavour (40 theoretical + 10 annual work). 50 points for the final exam.

12. Learning and teaching resources	
	1- Dr. Hashem Yahya Al-Masraf, Principles Cartography, First Edition 2- Dr. Hashem Yahya Al-Masraf, practical exerci in cartography 3- Dr. Khader Al-Abbadi, Cartoon Graffiti, M Projections

49. Course name:	
Geographic Information SystemsGIS	
50. Course code:	
51. Chapter/Year:	
quarterly	
52. Date this description was prepared:	
10/13/2024	
53. Available attendance forms:	
In-person only	
54. Number of study hours (total) / Number of units (total):	
3 hours per week / 3 units	
55. Name of the course administrator (if more than one name is mentioned)	
Name: Hadeel Abbas Abdul Zahra	
Email:	
56. Course objectives	
<ul style="list-style-type: none"> <li>• .....</li> <li>• .....</li> <li>• .....</li> </ul>	<p>The student should be able to employ the principles of geographic information systems.(GIS) By using spatial, descriptive, network and directed data for the purpose of preparing maps of all types (thematic, topographic and cadastral) and producing them in their final form as digital or paper maps with reports. And training students on how to use the DGPS system and its applications according to the requirements of the labor market.</p>

57. Teaching and learning strategies					
Education Strategy To prepare digital maps to collect, monitor, store, process, update and analyze data to produce results, display all information and extract thematic maps using the system (GIS).					Strategy
58. Course structure					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	Watches	The week
<b>Exams and discussion</b>	Article explanation Theory practice practically	Spatial and descriptive data Network and vector data	The student learns how to insert images and create data.	3 hours	the first
<b>Daily exams and discussions</b>	Explanation of the scientific material from And its practical application of Calculator	Geographical reference and geometric correction of the topographic map	The student learns how to correct an image in all ways.	3 hours	the second
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Geometric correction of the image Space	Preparing the student for the geographic return process	3 hours	the third
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	How to set up a new project using the program Arc Catalog	The student learns how to project and prepare a project.	3 hours	Fourth
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Drawing tools application trace tool, End point Arc segment, Point, Intersection tool	The student learns to draw maps and apply tools.	3 hours	Fifth

<b>Daily exams</b>	Article explanation Theory practice practically	Apply additional drawing tools Advanced Editing Tools	The student learns the commands for modifying graphics.	3 hours	Sixth
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Layers Properties window, including Layers application (Labeling) According to the data of the distribution tables fields, transparency	Helping the student to know the layers and apply them	3 hours	Seventh
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Intersection tool, Midpoint tool, Split tool	Learn the student editing tools	3 hours	The eighth
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Apply additional drawing tools Advanced Editing Tools (such as Copy Feature, Extent Tool, Trim Tool)	Learn the student editing tools	3 hours	Ninth
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Methods of enlarging and reducing landmarks and methods of selecting drawn landmarks (zoom to select) select feature, Pan to select Features	The student learns the teacher's selection commands.	3 hours	tenth
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Layers Properties window, including Layers application (Labeling) According to the data of the distribution tables fields, transparency	The student learns the teacher's selection commands.	3 hours	the tenth
<b>Daily exams and</b>	Article explanation Theory practice practically	Preparing descriptive tables for the features of each drawn layer.	The student learns to prepare a descriptive table and enter data.	3 hours	the second ten

<b>discussions</b>		(How to add fields to tables and delete fields) and methods of entering data into tables.			
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Preparing thematic maps (contour and field data)	Learn to prepare maps	3 hours	the thirten
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	Final preparation of all map elements	Learn to prepare the map	3 hours	Fourth ten
<b>Daily exams and discussions</b>	Article explanation Theory practice practically	<b>Layout</b> , Title, Border, Grid, Scale, Legend, Index, Map source.	Learn to prepare the map	3 hours	fifteen

59. Course Evaluation

Distribution as follows: 50 points for the endeavour (40 theoretical + 10 annual work). 50 points for the final exam.

60. Learning and teaching resources

5. Geographic Information Systems GIS The Complete Scientific Guide to ARCVIEW System / Translated and prepared by Dr. Eng. Haitham Youssef Zarqata	<b>1. GIS Step by Step</b> <b>Authors: Bassam Ahmed Abdel Hadi, Zaid Farhoud Makki, Maysaa Riad Al-Rujabi, Ziad Younis Taha Zayed. 2018</b>
6. Lectures by Dr. Muhammad Mahna Al-Sahli on Introduction to Geographic Information Systems / Kuwait University / College of Social Sciences	<b>2. Geographic Information Systems(GIS), General Administration for Curriculum Design and Development, Kingdom of Saudi Arabia 2010</b>

7. Overview of Geographic Information Systems / Dr. Mohammed Yaqoub Mohammed Saeed United Arab Emirates University	3. Foundations of Geodetic Surveying and GPS Juma Muhammad Dawood 1433/2012
	4. Global Positioning System Basics / Ministry of Higher Education and Scientific Research / University of Mosul Remote Sensing Center / Prepared by Sabah Hussein Ali

## Course Description Second Semester/Second Year

97. Course name:					
Advanced Surveying/2					
98. Course code:					
99. Chapter/Year:					
Second Semester/2024-2025					
100. Date this description was prepared:					
10/13/2024					
101. Available attendance forms:					
presence in the classroom					
102. Number of study hours (total) / Number of units (total):					
6 hours ((4 units					
103. Name of the course administrator (if more than one name is mentioned)					
Dr. Marwan Adel Hassan Email:Marwan.adil@stu.edu.iq					
104. Course objectives					
Teaching the student the basics of surveying and its use for civil engineering purposes. Qualifying the student to use various surveying devices for civil engineering work					
105. Teaching and learning strategies					
1-Using the computer to display scientific material when explaining and clarifying  2- Follow the discussion method to bring the material closer to the students.  3- Conduct tests and evaluation after the lecture.					<b>Strategy</b>
106. Course structure					
<b>Evaluation method</b>	<b>Learning method</b>	<b>Name of the unit or topic</b>	<b>Required learning outcomes</b>	<b>Watch es</b>	<b>The week</b>

<b>Daily exam and reports</b>	The lecture and practical application	Measuring horizon angles And vertical using Total station device	Knowing how measure angles Horizontal and vertical using Total station device	4 hours	the first
<b>Daily exam and reports</b>	The lecture and practical application	Height calculation remote point using Inverter and with inverter	Knowing how calculate height remote point using Inverter and with inverter	4 hours	the second
<b>Daily exam and reports</b>	The lecture and practical application	Calculate the sl distances and vertical between t points In my polycon way Radial	Know how to calculate Oblique spaces and vertical between t points In my polycon and radial way	4 hours	the third
<b>Daily exam and reports</b>	The lecture and practical application	Coordinate calculation A set of points and Use it in shedding One point or a group grid dots	Know how to calculate Coordinates of a set of points Use it in shedding One point or a group grid dots	4 hours	Fourth
<b>Daily exam and reports</b>	The lecture and practical application	Find a point along given straight line	Knowing how to find point Located on a straight line known	4 hours	Fifth
<b>Daily exam and reports</b>	The lecture and practical application	Calculate areas and Sizes	Know how to calculate Areas and volumes	4 hours	Sixth
<b>Daily exam</b>	The lecture	Surveying calculation	Know how to calculate Surveying	4 hours	Seventh

<b>and reports</b>	and practical application				
<b>Daily exam and reports</b>	The lecture and practical application	Surveying calculation	Know how to calculate Surveying	4 hours	The eighth
<b>Daily exam and reports</b>	The lecture and practical application	Dropping through line Creation and method Surveying	Knowing how to do from During the construction line and in a way Surveying	4 hours	Ninth
<b>Daily exam and reports</b>	The lecture and practical application	Perform intersection calculations the first	Know how to do First intersection accounts	4 hours	tenth
<b>Daily exam and reports</b>	The lecture and practical application	Perform intersection calculations the second	Know how to do Second intersection accounts	4 hours	at the tenth
<b>Daily exam and reports</b>	The lecture and practical application	Perform intersection calculations the third	Know how to do Third intersection accounts	4 hours	the second ten
<b>Daily exam and reports</b>	The lecture and practical application	Networks Control Horizontal, its types and degrees Its accuracy and classification methods Its uses and ranges	Networking knowledge Horizontal, its types and degrees Its accuracy and classification methods Its uses and ranges	4 hours	the third ten

<b>Daily exam and reports</b>	The lecture and practical application	Calculating the strength of the shape For different types Networks and condition achievement Angles and sides Stations	Knowing how to calculate power Shape for different types Networks and condition achievement Angles and sides Stations	4 hours	Fourth ten
<b>Daily exam and reports</b>	The lecture and practical application	Make the correct actions In different triangulation networks and dot shapes Different central	Know how to work Corrections followed Different triangulation networks and dot shapes Different central	4 hours	Fifth ten

#### 107. Course Evaluation

Exam	striving	Second semester exam	Chapter One Quest
50 degrees	50 degrees	10 reports and research	10 degrees reports and research
		20 monthly exams	20 marks monthly exam
		20 practical degrees	20 practical degrees

118. Course structure					
<b>Evaluation method</b>	<b>Learning method</b>	<b>Name of the unit or topic</b>	<b>Required learning outcomes</b>	<b>Watches</b>	<b>The week</b>

Daily written tests and discussion	Article explanation Theory and practice practically	<b>Know how to use the first intersection (To find two unknown lengths) using the trigonometric methods and the laws of polygons</b>	<b>Help the student know how to find the unknowns in the question.</b>	4 hours	the first
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Same vocabulary as the previous week. Solve different exercises using the first intersection (to find two unknown lengths).</b>	<b>The student learns to calculate intersections or unknown measurements in the process of ribbing and triangulation.</b>	4 hours	the second
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Using the methods of analytical geometry and coordinate rotation</b>	<b>Help the student in how to solve using different methods to calculate coordinates</b>	4 hours	the third
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Second intersection (to find the length of one side and the direction of another side)</b>	<b>Learn calculations using the triangle method</b>	4hours	Fourth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Using the laws of polygons, analytical geometry</b>	<b>Helping the student to know the applications in road intersections and land division</b>	4 hours	Fifth

Daily written tests and discussion	Article explanation Theory and practice practically	<b>Learn calculations using the triangle method</b>	<b>Developing the intellectual skill to find the directions of the two unknown sides.</b>	4 hours	Sixth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Learn calculations using the triangle method</b>	<b>Teaching the student to use other methods such as the analytical method.</b>	4 hours	Seventh
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Lengths and directions of ) in circular and concentric polygons</b>	<b>Teaching calculations in finding unknown measurements</b>	4 hours	The eighth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>To find the location of a selected point by observation</b>	<b>Knowing the types of back or reverse intersection</b>	4 hours	Ninth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Land division</b>	<b>How to prepare a logical line table to find measurements</b>	4 hours	tenth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Polygon division</b>	<b>Help the student divide the polygon into two parts.</b>	4 hours	eleventh
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Dividing a polygon into two equal parts</b>	<b>Preparing the student to learn how to divide lands of all types</b>	4 hours	twelfth
Daily written tests and discussion	Article explanation Theory and practice practically	<b>Small project to divide large</b>	<b>Teaching the student on the devices to complete the project</b>	4 hours	thirteenth

		lands using calculations			
Daily written tests and discussion	Article explanation Theory and practice practically	Complete the project calculations and draw its horizontal plan.	Student assistance in learning about charts and calculations	4 hours	fourteenth
Daily written tests and discussion	Article explanation Theory and practice practically	And hold discussions on the final results of the division.	Helping the student in how to conduct discussions	4 hours	Fifth ten
119. Course Evaluation					
Distribution as follows: 50 points for the endeavour (40 theoretical + 10 annual work). 50 points for the final exam.					
120. Learning and teaching resources					
Youssef Siam2001, Surveying - Faculty of Engineering University of Jordan			1-Raymond E. Davis Joe Wkelly. Elementary plan surveying 2- Singh, Narindr Surveying_ Tata MC Graw – Hill publishing company		
Yassin Obaid Ahmed1990 Engineering Surveying Faculty of Engineering, Al-Bahou University			Ziad Abdul Jabbar Al-Bakr, Ibrahim Daq Alwan Practical Area		
			Razan Ibrahim2011, Fundamentals of Surveying, Amman - Community Library

<b>8. Course objectives</b>					
Students implement a project within the specialized subjects in civil technology, carry out all field and office work, and submit a final report with all the necessary calculations, plans, and maps.					
<b>9. Teaching and learning strategies</b>					
1. Cognitive strategies. 2. Active learning strategies. 3. Cooperative learning strategies. 4. Discussion strategy.					Strategy
<b>10. Course structure</b>					
Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	Watches	The week
<b>Chapter One</b>					
Reports and discussions	Practical lectures	Conduct research and review available references and resources related to the project topic, consult specialists and departments to gain more knowledge on the topic, and write summaries on how to plan the project and schedule its timing.	1- Enabling the student to work in groups and develop team spirit.	2 hours per week (practical)	First to third

	Revising the information available above and preparing the necessary equipment, devices, panels, symbols and other accessories, and starting to implement the project in its field or laboratory stages first, then the drawing and the calculations, plans and maps that follow, according to the nature of the project.	2- Scientific research skill and conducting studies and research.		Fourth to Seventh
	Completion of field, laboratory or drawing work related to the project and according to the instructions of the supervising faculty member	3- Applying what was learned in the various stages of study to form a practical knowledge base for future field work.		The eighth To the twenty-fifth
	Conducting final calculations, drawings, plans and maps and presenting the final project report to the relevant supervisor.			twenty-sixth to twenty-ninth
	Submit and conduct the final project evaluation interview.			thirty

**11. Course Evaluation**

Distribution as follows: 100 degrees
